Internal classification based on measured thermal resistance  $R_{ct}$   
in accordance with DIN EN ISO 11092:2014-12<sup>A</sup>

This is an internal classification based on measured  $R_{ct}$  values. It is not an official, legally regulated, or third-party rating system.

The material-specific thermal resistance ( $R_{ct}$ ) of our disposable blankets is determined in accordance with DIN EN ISO 11092. Testing is performed using a standardized skin model under defined laboratory conditions. The  $R_{ct}$  value describes the thermal performance of the material and serves as an objective basis for evaluating thermal properties.

Based on measured  $R_{ct}$  values, our products are classified into the internal Rescue Trade Thermal Rating system. This system helps users quickly select the appropriate blanket based on the intended application and temperature requirements.
